To implement Kruskal's MST Algorithm using greedy method

Program code:

```
#include <stdio.h>
#include <stdlib.h>
#define MAX_EDGES 1000

typedef struct Edge {
  int src, dest, weight;
} Edge;

typedef struct Graph {
  int V, E;
  Edge edges[MAX_EDGES];
} Graph;
```

```
typedef struct Subset {
  int parent, rank;
} Subset;
Graph* createGraph(int V, int E) {
  Graph* graph = (Graph*) malloc(sizeof(Graph));
  graph->V=V;
  graph->E = E;
  return graph;
}
int find(Subset subsets[], int i) {
  if (subsets[i].parent != i) {
    subsets[i].parent = find(subsets, subsets[i].parent);
  }
  return subsets[i].parent;
}
void Union(Subset subsets[], int x, int y) {
  int xroot = find(subsets, x);
  int yroot = find(subsets, y);
   if (subsets[xroot].rank < subsets[yroot].rank) {</pre>
    subsets[xroot].parent = yroot;
```

```
} else if (subsets[xroot].rank > subsets[yroot].rank) {
    subsets[yroot].parent = xroot;
  } else {
    subsets[yroot].parent = xroot;
    subsets[xroot].rank++;
  }
}
int compare(const void* a, const void* b) {
  Edge* a_edge = (Edge*) a;
  Edge* b_edge = (Edge*) b;
  return a_edge->weight - b_edge->weight;
}
void kruskalMST(Graph* graph) {
  Edge mst[graph->V];
  int e = 0, i = 0;
  qsort(graph->edges, graph->E, sizeof(Edge), compare);
  Subset* subsets = (Subset*) malloc(graph->V * sizeof(Subset));
  for (int v = 0; v < graph->V; ++v) {
    subsets[v].parent = v;
    subsets[v].rank = 0;
  }
```

```
while (e < graph->V - 1 \&\& i < graph->E) {
    Edge next edge = graph->edges[i++];
    int x = find(subsets, next edge.src);
    int y = find(subsets, next edge.dest);
     if (x != y) {
      mst[e++] = next edge;
      Union(subsets, x, y);
    }
  }
   printf("Minimum Spanning Tree:\n");
  for (i = 0; i < e; ++i) {
    printf("(%d, %d) -> %d\n", mst[i].src, mst[i].dest, mst[i].weight);
  }
}
int main() {
  int V, E;
  printf("Enter number of vertices and edges: ");
  scanf("%d %d", &V, &E);
  Graph* graph = createGraph(V, E);
  printf("Enter edges and their weights:\n");
  for (int i = 0; i < E; ++i) {
  scanf("%d %d", &graph->edges[i].src, &graph->edges[i].dest, &graph-
>edges[i].weight);
```

```
}
kruskalMST(graph);
return 0;
}
```

Output -

```
Enter number of vertices and edges: 5 7

Enter edges and their weights:
0 1 2
0 3 6
1 3 8
3 4 9
1 4 5
1 2 3
2 4 7

Minimum Spanning Tree:
(0, 1) -> 2
(1, 2) -> 3
(1, 4) -> 5
(0, 3) -> 6

...Program finished with exit code 0

Press ENTER to exit console.
